Final Project CheckPoint
Yolanda Nyasha Chigiji

We are now almost done with the final project. We are now left with implementing the graphics part of the project and connecting it to the other parts. Yes this project challenges me. I will be learning how to create a graphics class from scratch and attaching it to the other classes that are in our project. This project has been successful, because we managed to do the work that we had set ourselves to do for the first week. We are yet to assess and see if the graphics part is doable the way we want to do and how we can be able to implement our ideas. We divide the work amongst ourselves and someone got something to do and everyone managed to do their part on time. We have also set deadlines and tasks for each other for the upcoming week and we are yet to assess each other on those. I hope to learn from the challenges that remain. My team members are working well on the project and I am happy about our progress. I would give us and myself an A because we managed to get the work that we had set for ourselves on time.
